Editor Information

Julie M. Davis, *Queensland University of Technology*

Julie M. Davis taught and researched at the Queensland University of Technology for over 30 years focusing on embedding environmental and sustainability education into science, social studies and health education subjects.

Sue Elliott, *University of New England*

Sue Elliott is an Adjunct Senior Lecturer in Early Childhood Education at the University of New England and has demonstrated a long term commitment to early childhood education for sustainability through her leading roles in Australia and internationally.

In a time of climate crisis, it is crucial that young children develop the knowledge, skills, values and worldviews to build and live in a sustainable world. *Young Children and the Environment* is a practical, future-oriented resource that explores how early childhood educators can work with children, their families and the wider community to tackle issues of sustainability.

Now in its third edition, this seminal text covers Early Childhood Education for Sustainability, as well as the science of sustainability, public health, children's wellbeing, ethics and a broad range of environmental management topics. 'Stories from the Field' present practical ideas for early childhood educators to support their own learning and teaching in sustainability, and international case studies provide examples of how sustainability is explored with young children across the globe.

Young Children and the Environment is a call to action for those who work with children to put in place thinking and practices for a sustainable future. Forever hopeful, this book is a vital resource for tertiary students and practitioners looking for guidance on how to implement change for the future of children and the environment.

Young Children and the Environment | Early Education for Sustainability | Third Edition

Key Features

- Leading book in the area to cover sustainability in early childhood education
- Includes case studies from around the world
- Written by leading experts in the field
